

BMC for Helix Portfolio Management

OVERVIEW

In today's business world, companies interact with multiple stakeholders on a variety of projects with complex needs and demands. It can therefore become difficult to simultaneously keep track of multiple ongoing projects and overall performance. To stand out and excel in the market, organisations require a solid project portfolio management strategy. They need to access concrete and comprehensive data in order to adapt to changing situations and rapidly provide solutions for any given problem

BUSINESS CHALLENGE

For such complexities, organisations need to be focused on helping stakeholders complete projects in an easier way, resulting in greater efficiencies and more accurate decision-making. A project portfolio management tool provides centralised visibility into all projects and helps organisations effectively manage time, skills, resources, and budgets while managing risk. It also supports dynamic decision-making so management can reach consensus and focus on projects that are achievable and strategically aligned with their business goals

BMC SOLUTION

BMC Helix for Portfolio Management is a solution designed to manage the decision-making processes around project-oriented initiatives and how they support strategic business objectives. From an idea or a requirement through to demand management; with implementation via programs and projects, BMC Helix for Portfolio Management provides a streamlined framework for the efficient execution of different business processes.

KEY FEATURES

Idea Management: A structured system to collate ideas and proceed towards their implementation. Fully integrated into BMC Helix Digital Workplace

Project Management: Agile as well as Waterfall project management to empower your teams to work efficiently and flexibly on projects.

Resource Management: Make decisions on resources to reach an adaptable dynamic state.

KEY BENEFITS

- 360° view of the business at any given time
- Better decision-making and project planning
- Discover workflow patterns
- Improved ownership and progression
- Continuous execution and value delivery

PRODUCT DETAILS

Idea Management:

A structured system to collate ideas and proceed towards their implementation; for analysing idea feasibility and the advantages they may bring to the organisation. Fully integrated into BMC Helix Digital Workplace to leverage all innovations.

Demand Management:

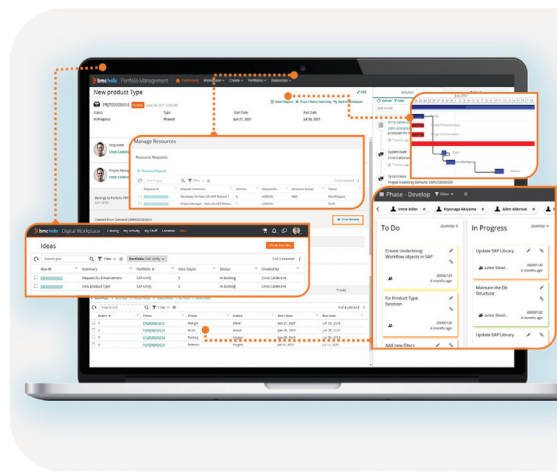

Manage the end-to-end assessment and all PMO related activities. Extensive functionality to optimally manage risks, resources, and stakeholders. Once completed, this can result in new projects or portfolios

Project Management:

Agile as well as Waterfall project management to support your teams to work efficiently and flexibly on projects. Addition of Gantt and Kanban to manage your tasks with an easy drag-drop method. Automatically create your backlog from portfolio requirements. If a task does not get implemented in a project, the request stays safe in the portfolio and will be automatically assigned to the next release/project.

Portfolio Management:

Portfolio management: Central overview of all activities connected to your portfolio, both IT and line of business related. A 360-degree view of all projects and programs, as well as visibility of employees' ideas (both historical and new) in your portfolio.

Program Management:

A subsection of portfolio management designed to collaboratively manage projects which share the same business objective or are related to each other. Contains and manages ideas, requirements, and demands created within it.

Resource Management:

Helps you to make decisions on how to achieve optimal use of limited resources, where to make increases in capacity and analyse levels of utilisation. This enables you to reach an adaptable dynamic state, with extensive features from requesting and assigning users, to enabling users to log timecard
